

FALCON Ceiling

Circular ceiling air diffuser for supply air

QUICK FACTS

- Manages large supply airflows
- Horizontal or vertical distribution pattern
- Provision for motorised adjustment of the distribution pattern
- Suitable for airborne heating
- Can be used with the ALS commissioning box
- Cleanable
- Standard colour White RAL 9003
 - 5 alternative standard colours
 - Other colours upon request

Technical description

Design

The FALCON C consists of two parts: an outer cone with rubber ring sealed-fitted spigot connection on the sizes up to and including size 400 as well as an aerodynamically designed outlet cone. The inner cone is height-adjustable and removable.

The inner cone can be set to a new position by hand or its setting can be changed by a motor. The FALCON C with electric motor is available in sizes 315, 400 and 500. The motor-actuated model has a longer spigot connection. See the dimension table and Figure 6.

Materials and finish

The entire air diffuser is made of sheet steel and its interior and exterior surfaces are painted.

- Standard colour:
 - White semi-gloss, lustre 40, RAL 9003/NCS S 0500-N
- Alternative standard colours:
 - Silver gloss, lustre 80, RAL 9006
 - Grey aluminium gloss, lustre 80, RAL 9007
 - White semi-gloss, lustre 40, RAL 9010
 - Black semi-gloss, lustre 35, RAL 9005
 - Grey semi-gloss, lustre 30, RAL 7037
- Non-painted finish and other colours available on request.

Accessories

Commissioning box:

ALS. Made of galvanised sheet steel. The box contains a removable commissioning damper, fixed measurement tapping and sound absorbent insulation covered by a reinforced surface layer, rated to Fire resistance class B-s1,d0 conforming to EN ISO 11925-2. Tightness class C on the housing according to SS-EN 12237.

Controller for resetting motor-actuated air diffusers:

VHC. The controller resets motor-actuated (24 V) air diffusers, which are designed for supply air below room temperature and above room temperature. The controlling parameter is the temperature difference between the supply air and the room air. See separate product datasheet for the VHC at www.swegon.com.

Project design

For airborne heating systems, the distribution pattern should be calculated according to computer-calculated values. Use our ProAir air diffuser selection computer program that is available at www.swegon.com.

The air diffuser is available as from size 315 and upward with motorised actuation of the cone position in order to via thermostat, or other external switch, control from horizontal to vertical air diffusion or vice versa.

Installation

Secure the inlet spigot to the connecting duct using blind rivets. If an ALS commissioning box is used, the sleeve coupling between the ALS and the FALCON C can be lengthened using an ordinary circular duct of up to 500 mm without having to lengthen the measuring tubes and damper adjustment cords. See Figure 1.

Commissioning with the ALS commissioning box

Commissioning should be carried out with the diffuser face mounted. Pull the measuring tubes and damper adjustment cords out of the air diffuser through the gap.

Measurement accuracy and requirement on straight duct before the commissioning box, see Figure 1. The requirements of straight duct depends on the type of disturbance before the commissioning box. Figure 1 shows a bend, a dimensional change and a T-piece. Other types of disturbances requires at least $2xD$ straight ($D = \text{connection dimension}$) for measurement accuracy of $\pm 10\%$ of the flow.

The K-factor (COP) is specified on the product's identification label. K-factors can also be found in the relevant commissioning instructions at www.swegon.com.

Maintenance

Clean the air diffuser if needed with lukewarm water and dish-washing detergent added.

The duct system is accessible without the need for tools. The cone package can be dismantled by screwing out the plastic screws on the inner side of the outer cone. If an ALS commissioning box is used, move the air distribution plate out of the way and turn the damper unit out of its holder with a simple twist of the hand.

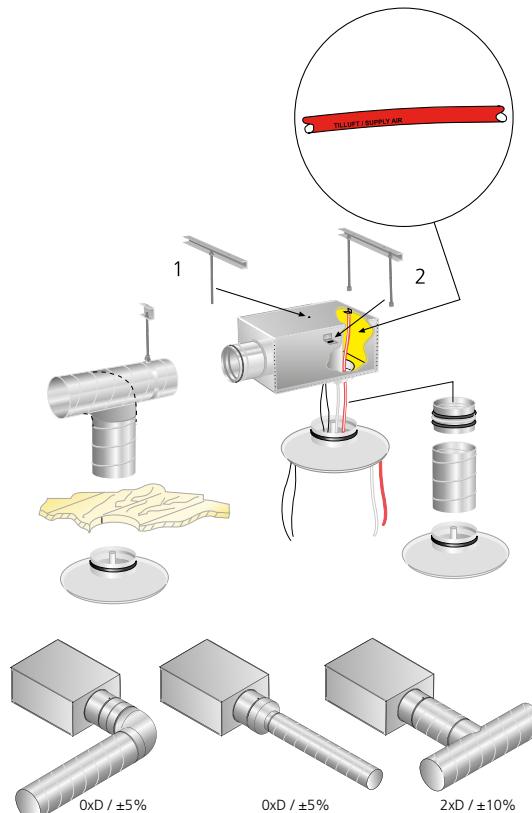

Figure 1. Installation. Commissioning.

Wiring diagram

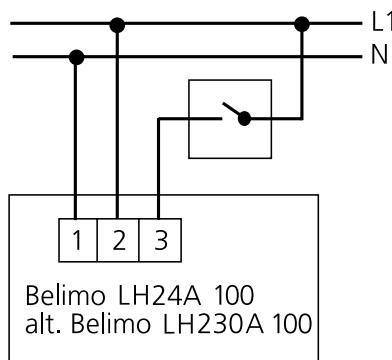

Figure 2. Wiring diagram for the FALCON C with motor – 2-point motor positioning control. The switch is not included.

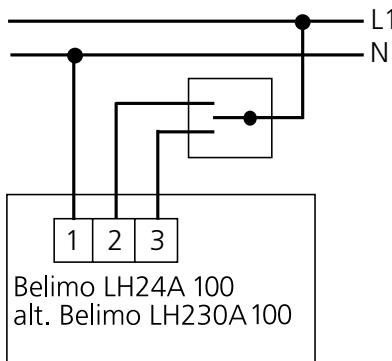

Figure 3. Wiring diagram for the FALCON C with motor – 3-point motor positioning control. The switch is not included.

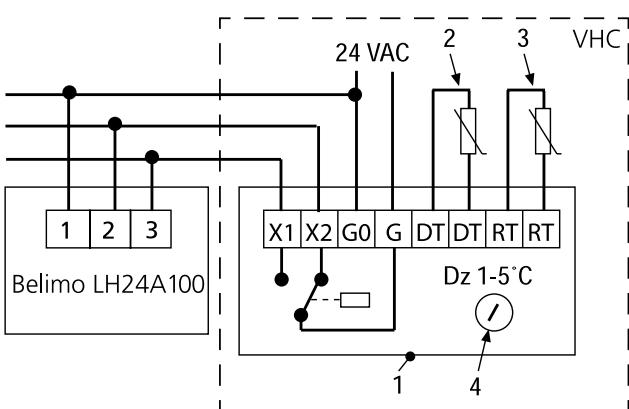

Figure 4. The wiring diagram shows the connections with the Belimo damper motor against the VHC. NOTE! Only available with 24 V AC power supply.

Key to Figure 4.

2 = Duct temperature sensor (DT)

3 = Room temperature sensor (RT)

4 = Setting the switch-over temperature

Motor Properties

Motor	Supply voltage	Power consumption	Delay time
LH24A 100*)	24 V AC 50/60 Hz	3 VA	150 s
LH230A 100**)	230 V AC 50/60 Hz	5 VA	150 s

*) Standard, stocked motor, can be connected to VHC controller.

**) Non-stocked motor.

Sizing

- Sound pressure level dB(A) applies to rooms with 10 m² equivalent sound absorption area.
- Sound attenuation (ΔL) below is shown in the octave band. Orifice attenuation is included in the values.
- Throw length $l_{0,2}$ is measured under isothermal discharge conditions.
- The recommended max. permissible temperature below room temperature is 10 K.
- The horizontal distribution pattern is specified with the inner cone package set to its lower position. See the dimension drawing.
- The vertical distribution pattern is specified with the inner cone package set to its upper position. See the dimension drawing.

L_w = Sound power level

L_{p10A} = Sound pressure level dB (A)

K_{OK} = Correction for producing the L_w value in the octave band

$L_w = L_{p10A} + K_{OK}$ gives the frequency divided octave band

Sizing diagram

FALCON C and FALCON C + ALS – Supply air

Horizontal and vertical distribution pattern

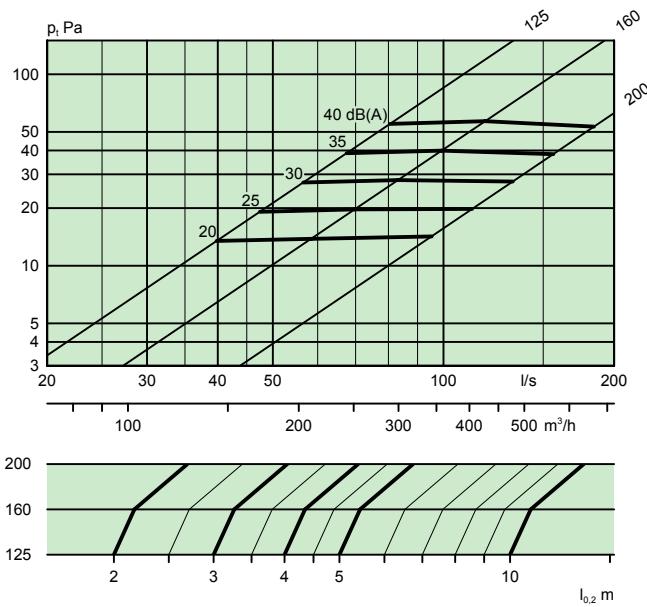

- The throw length $l_{0.2}$ is measured under isothermal discharge conditions.
- The recommended max. permissible temperature below room temperature is 10 K.

FALCON C – Supply air

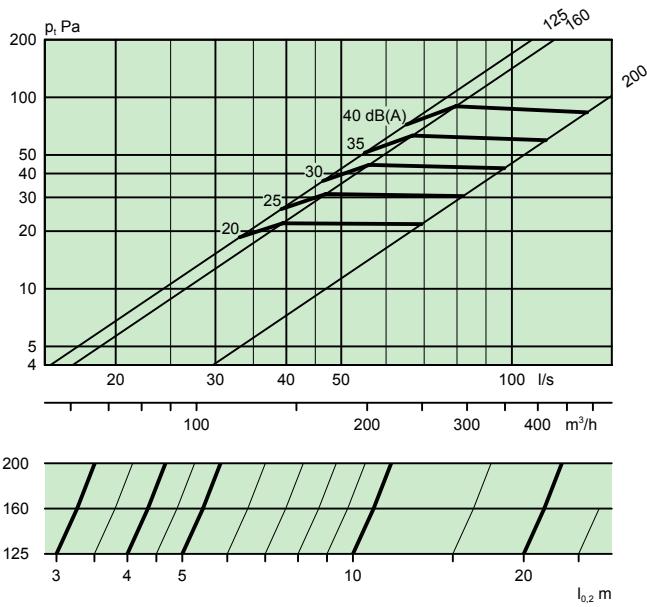

Air diffuser only

Air flow - Pressure drop - Sound level - Throw length

FALCON C 125 – 200 Horizontal

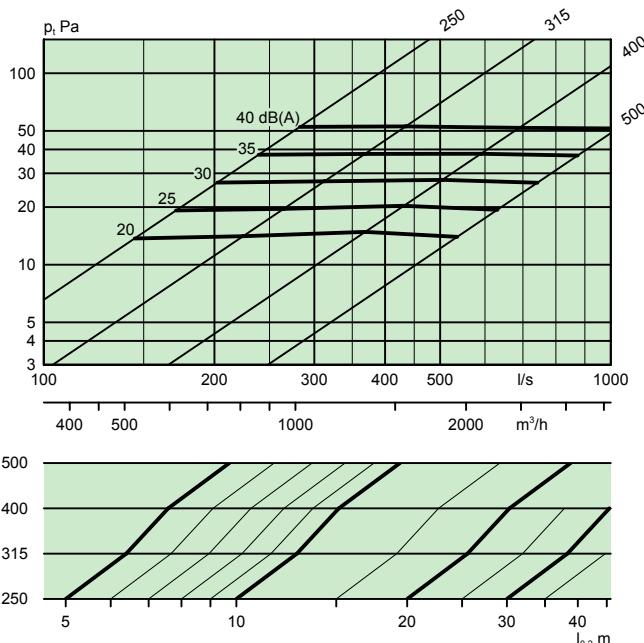

FALCON C 125 – 200 Vertical

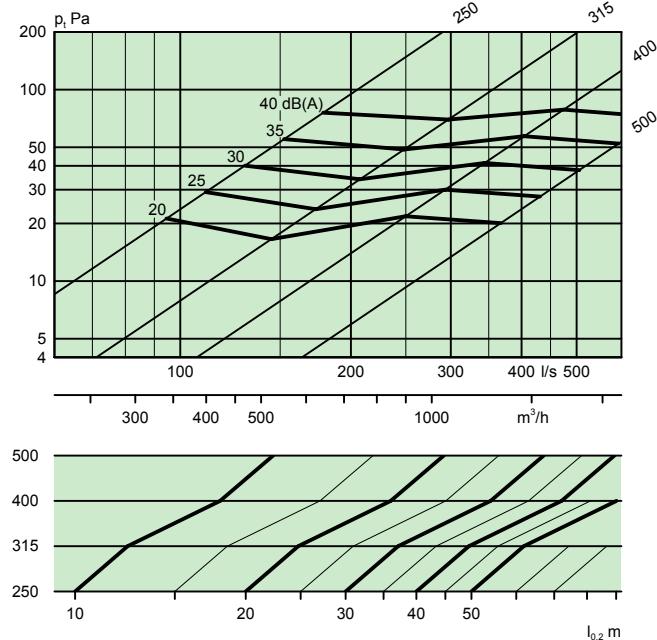

- To calculate the air stream diffusion, air velocities in the occupied zone or sound levels in rooms with other dimensions, please refer to our calculation software, which is at www.swegon.com.
- The diagrams illustrate data for recessed air diffuser in a ceiling.
- The diagrams should not be used for commissioning.
- The dB(A) values apply to rooms with normal acoustic absorption, 4 dB room attenuation/10 m² equivalent room absorption area.
- The dB(C) value is normally 6-9 dB higher than the dB(A) value.

FALCON C 250 – 500 – Horizontal

FALCON C 250 – 500 – Vertical
